

Dollars at Work

Eye Equipment

Children's Miracle Network has purchased several state-of-the-art pieces of equipment to help kids with eye conditions that result from extreme prematurity, child abuse or various diseases.

Retcam – a high resolution camera for the inside of the eye that allows doctors to diagnose and follow many serious eye conditions such as glaucoma, retinal degeneration and retinopathy of prematurity. The machine can be wheeled to the operating room, neonatal and pediatric intensive care units to diagnose a patient during surgery or at the bedside.

Dr. Soni

Operating

Microscope – Surgeons use this microscope during cataract or glaucoma surgery to obtain the best possible view so they can perform surgeries safely and with the greatest precision.

“Having the most up-to-date equipment allows us to deliver the best care possible. It has been an honor to have such tremendous support from Children's Miracle Network donors. We are able to take better care of kids because of it.”

-Ajay Soni M.D., pediatric ophthalmologist
