Individuals discover new interests, practice and strengthen skills, connect with others, make friendships, expand breadth of experience and achieve personally set goals through individualized supports and training provided by adult mentors in community settings or the home.

Assistive Technology is any item, piece of equipment or product system, whether acquired commercially off the shelf, modified or customized, that is used to increase, maintain or improve the functional capabilities of individuals with disabilities.

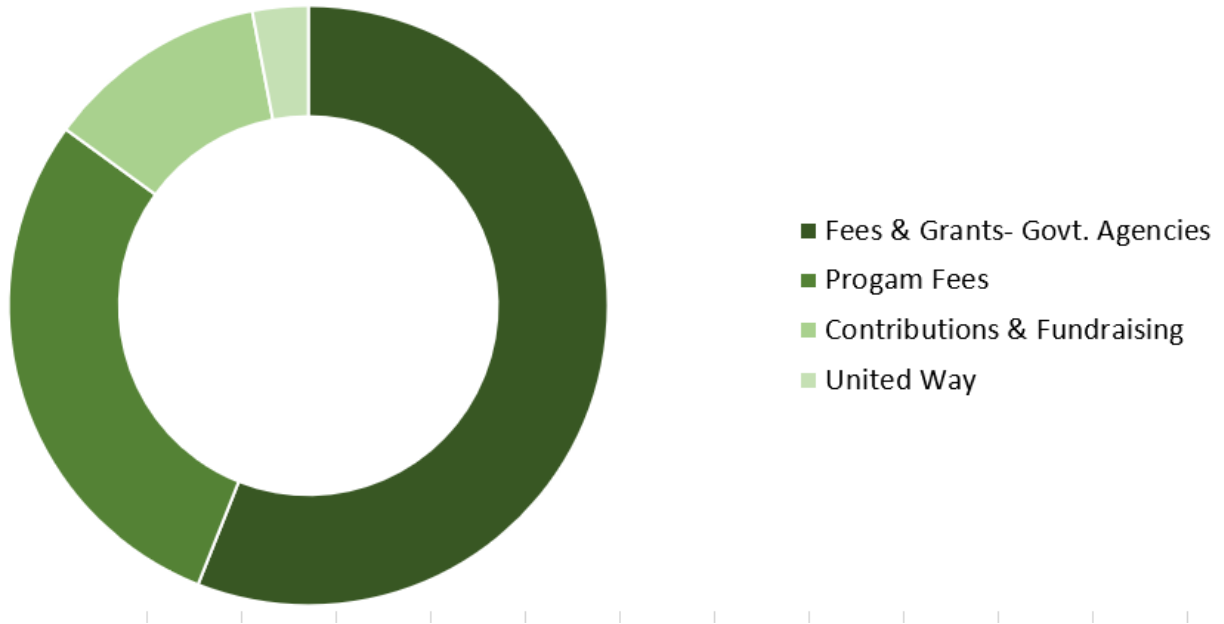

Adults learn work and workplace skills through individualized training and completion of subcontract work from local businesses. Life skill training and adult enrichment programs increase knowledge, skills, and breadth of experience. Nursing care, dietary services, therapeutic methods, and assistance for personal care enhance health, wellness, and physical function.

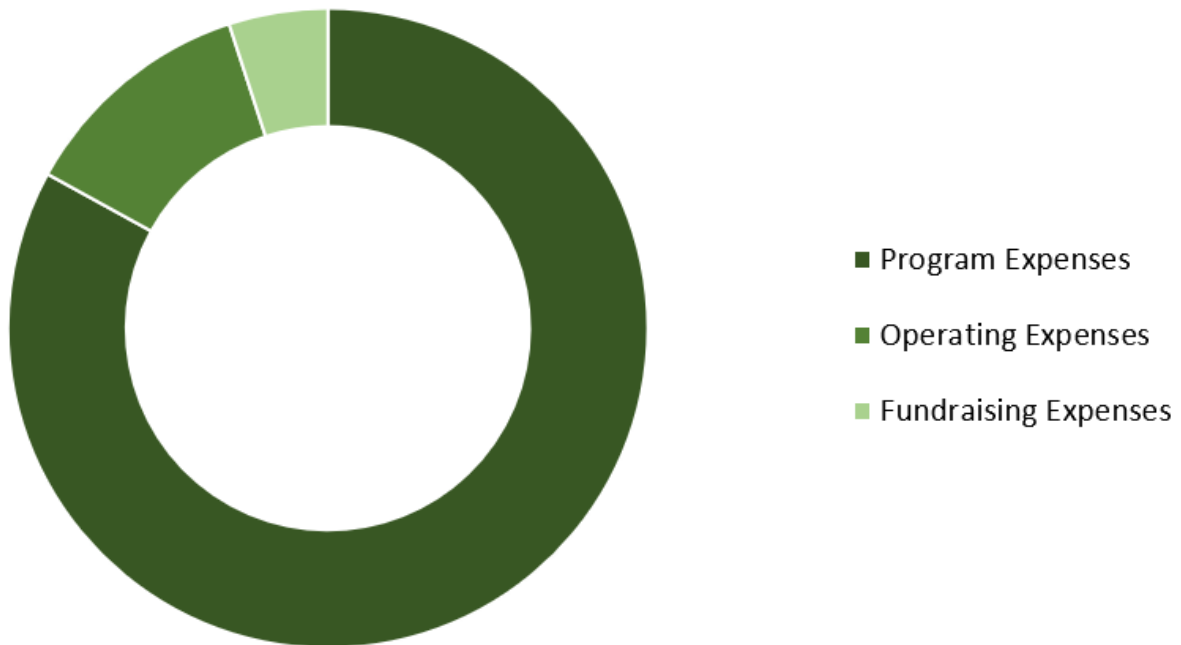

Children with complex medical needs receive specialized health care by classroom-based registered nurses, based on physician's orders. Nurses detect and address medical issues, collaborate with other health care professionals, respond to medical emergencies, and maintain close communication with the family and physician. Adapted dietary programs support nutritional well-being.

Support & Revenue
Total: \$7,536,466

Expenses
Total: \$7,212,000

Net Assets at June 30, 2018: \$10,693,194
