

STREAMING FOR KIDNEYS: THE BASICS

Set Up a Stream for Kidneys Page

Head to <https://team.kidney.org/event/stream> and create your page.

Sync Your Stream

Once registration is complete, you'll be prompted to add your Twitch, Mixer or YouTube Live stream. Sign in using your credentials, and your stream will appear on your Stream for Kidneys page.

Add the Team Kidney Charity Fundraising Twitch Extension

With your Team Kidney page created, Twitch users can also add the Team Kidney Charity Fundraiser extension. This extension will add a donate button that funnels donations back to your Stream for Kidneys page AND a donor leader board to your channel. It also allows audience members to donate without having to leave your Twitch channel and to keep tabs on your progress.

Use NKF's Stream Overlay

Show your audience your fundraising progress and recent donations using NKF's custom overlay. Copy the link from your fundraising page and add it to your stream.

Set Up a Charity Stream on Tiltify

Tiltify is a crowdfunding platform designed for gamers to raise money through their streams, for their favorite causes. You can start an NKF charity stream on Tiltify at <http://tiltify.com/national-kidney-foundation>
